Fresh, may full treation, trafficking and development of cells, e.g. for differentiation, trafficking and development of cells, e.g. for treating inflammation, cancer and degeneration

Claim 16, Page 18-19; 119pp: English.

Claim 16, Page 18-19; 119pp: English.

The present sequence encodes a cysteine rich soluble protein (CRSP) designated C23. CRSP proteins, and their (anti-agonists, are used to modulate physiology, differentiation, trafficking and development of cells (including those in culture), particularly cells of the mammalian immune system. They are used for treatment of abnormal proliferation (cancer, inflammation or degeneration), regeneration, degeneration and atrophy. The proteins are also used to raise, or detect, antibodies, to design oligonucleotides for library screening, in drug screens and to isolate cognities. The antibodies are used for affinity purification of CRSP, to screen expression libraries, to identify CRSP-expressing cells, as diagnostic immunoassay reagents, to produce anti-idiotypic antibodies (useful for diagnosis), in competitive drug screens, and as therapeutic modulators. Altabeth burners secreted proteins. The polynucleotides and their corresponding secreted proteins. The polynucleotides and their corresponding secreted prolypeptides are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Pathological conditions can also be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each polynucleotide, based on which tissues they are nost highly expressed in, and include developing products for the diagnosis or treatment of cancer, immune disorders, infection, inflammatory disorders, skin disorders, tumours, atherosclerosis, restenosis, autoimmune disorders, Alzheimer's disease, peripheral neuropathies, trauma, spinal cord injuries, allergy, hematopoietic disorders, asthma, immunodeficiency diseases, AIDS and transplant rejection. The polypeptides are also useful for identifying their

The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proliferation/differentiation activity, haematopoiesis regulating activity, tissue growth regulating activity, reproductive hormone regulating activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, antiinflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for

The present sequence encodes a cysteine rich soluble protein (CRSP) designated C19. CRSP proteins, and their (ant)agonists, are used to modulate physiology, differentiation, trafficking and development of cells (including those in culture), particularly cells of the mammalian immune system. They are used for treatment of abnormal

proliferation (cancer, inflammation or degeneration), regeneration, degeneration and atrophy. The proteins are also used to raise, or descent, antibodies, to design oligonucleotides for library screening, in drug screens and to isolate cognate receptors. The antibodies are used for affinity purification of CRSP, to screen expression libraries, to identify CRSP-expressing cells, as diagnostic immunoassay reagents, to produce anti-idiotypic antibodies (useful for diagnosis), in competitive drug screens, and as therapeutic modulators.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               à
                                                                                    The present sequence encodes a cysteine rich soluble protein (CRSP) designated C19. CRSP proteins, and their (antigonists, are used to modulate physiology, differentiation, trafficking and development. Of cells (including those in culture), particularly cells of the mammalian immune system. They are used for treatment of abnormal proliferation (cancer, inflammation or degeneration), responsation, of degeneration and atrophy. The proteins are also used to raise, or detect, antibodies, to design oligonucleotides for library screening, in drug screens and to isolate cognate receptors. The antibodies are competitive purification of CRSP, to screen expression libraries, to identify CRSP-expressing cells, as diagnostic immunoassay reagents, to produce anti-idiorypic antibodies (used for affinity purification of SRSP, to screen expression libraries, competitive drug screens, and as therapeutic modulators.
                                                                                                                                                                                                                                                                                                                            ö

Translation, warring the proteins - used to modulate proliferation, and generation, and generation, cancer and development of cells, e.g. for treating inflammation, cancer and degeneration

Trainis, Page 17: 119pp: English.

The present sequence encodes a cysteine rich soluble protein (CRSP)

Gesignated ClO. (RSP proteins, and their (ant)agonists, are used to modulate physiology, differentiation, trafficking and development of cells (including those in culture), particularly cells of the mammalian immune system. They are used for treatment of abnormal profileration (cancer, inflammation or degeneration), regeneration, degeneration and atrophy. The proteins are also used to raise, or detect, antibodies, to design oligonucleotides for library screening, to defect, antibodies, to design oligonucleotides for library screening, used for affinity purification of CRSP, to screen expression libraries, to identify CRSP-expressing cells, as diagnostic immunosasay reagents, to identify CRSP-expressing cells, as diagnostic immunosasay reagents, in content and anti-idiotypic antibodies (useful for diagnosis), in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       292
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                365
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  425

New cysteine-rich soluble proteins - used to modulate proliferation, differentiation, trafficking and development of cells, e.g. for treating inflammation, cancer and degeneration
Claim 16, Page 13; 119pp; English.

The present sequence encodes a cysteine rich soluble protein (CRSP)
Gesignated CaD. CRSP proteins, and their (ant)agonists, are used to modulate physiology, differentiation, trafficking and development of cells (including those in culture), particularly cells of the mammalian immune system. They are used for treatment of abnormal proliferation (cancer, inflammation or degeneration), regeneration, degeneration and atrophy. The proteins are also used to raise, or detect, antibodies, to design oligonucleotides for library screening, in drug screens and to isolate cognate receptors. The antibodies are used for affinity purification of CRSP, to screen expression libraries, to identify CRSP-expressing cells, as diagnostic immunoassay reagents, to produce anti-idiotypic antibodies (useful for diagnosis), in competitive drug screens, and as therspectic modulators.

and diagnosis of tuberculosis.

Claim 4; Page 187-188; 250pp; English.

Claim 5; An an antigenic portion of Mycobacterium tuberculosis antigen XD25; 5' DNA is provided in V44438. XP25 DNA was isolated from A. tuberculosis strain Erdman C genomic DNA expression library using sera from patients having extrapulmonary tuberculosis. It bears no similarity to known sequences. The invention relates to methods and compositions for diagnosing tuberculosis. It provides polypeptides (see W4429146473) comprising an antigenic portion of a soluble M. tuberculosis antigen, or an immunogenic portion of a Soluble M. tuberculosis antigen, as well as DNA sequences encoding such transfected host cells. Also claimed are methods and diagnostic kits for detecting M. tuberculosis infection in a patient using these polypeptides, antibodies or oligonucleotide probes and
                                                                                                                                                                                                                                                                                                                                                                                  New isolated Mycobacterium tuberculosis polypeptides and DNA - used to develop products for the detection of M. tuberculosis infection

Treating inflammation, cancer and degeneration

Claim 16, Page 12-13; 119pp; English.

The present sequence encodes a cysteine rich soluble protein (CRSP)

designated C2. CRSP proteins, and their (ant)agonists, are used to modulate physiology, differentiation, trafficking and development of cells (including those in culture), particularly cells of the nammalian immune system. They are used for treatment of abnormal proliferation (cancer, inflammation or degeneration), regeneration, degeneration and atrophy. The proteins are also used to raise, or detect, antibodies, to design oligonucleotides for library screening, in drug screens and to isolate cognate receptors. The antibodies are used for affinity purification of CRSP, to screen expression libraries, to produce anti-idioxypic antibodies (useful for diagnosis), in competitive drug screens, and as therapeutic modulators.

This sequence encodes an immunogenic portion of a soluble Mycobacterium tuberculosis (MT) antigen which can be used in a method for inducing protective immunity against tuberculosis (TB). This sequence can be formulated into vaccines and/or pharmaceutical compositions for immunising against M. tuberculosis infection or may be used for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              predicted amino acid sequence of ORF2"

                                                                                                                                                                                                                          The specification describes antisanes oligonucleotides (X52869-X5571)

The specification describes antisanes oligonucleotides (X52869-X5571)

directed against at least 2 mRNAs selected from target genes, coding and

con-coding regions of RNAs corresponding to target genes, coding and

initiation codons, genomic flanking regions, intron-exon borders, the

configuration codons, genomic flanking regions, intron-exon borders, the

configuration codons of the juxta-section between coding and non-coding

cregions and all segments of RNAs encoding proteins associated with one

or more diseases, conditions or mixtures. The antisense oligonucleotides (specifically X5180-271) can be used for the antisense

creatment of diseases and conditions. Typical diseases and conditions

are those associated with impaired respiration and inflammation,

allergic rhinitis, acute asthma, allergies, asthma, impeded respiration,

crespiratory distress syndrome, pain, cystic fibrosis, pulmonary

clanding lung diseases (COPD), and cancer, such as leukemias, lymphomas,

cancer, hepatocellular carcinoma, kidney cancer, melanoma, hepatic

metastasized to the lungs, including breast and prostate cancer.

cencer as well as all types of cancers which may metastasize or have

metastasized to the lungs, including breast and prostate cancer.

Human chromosome 19 derived USF2 gene sequence.

Hydronephrosis gene, HWG gene, USF2 gene; renal disease; renal aplasia; vesical-ureteral reflux; pelvi-ureteral junction obstruction; multicystic renal dysplasia; renal agenesis; hydronephrosis; Von Mayer-Rokitansky-Kuester disorder; bifid ureter; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           140 ATCCAGGAGGTCGCCGGCTCCCTAATATTTAGGGCAATAAGCAGCATTGGCCTGGAGTGC 199
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                      protein, beta-5, which is found in carcinomas but not in lymphoid cells. An immunoassay for the detection of beta-5, comprises contacting a sample with a monoclonal antibody (Ab) which binds epitope of beta-5 and then with a labelled Ab which binds another of beta-5 and detecting any bound label. An assay for hybridising to the beta-5 cDNA, and determining if binding has occurred. These assays are useful for detecting carcinomas, and for sequence 3415 BP; 752 A; 1009 G; 711 T;
                                                                                                                                                              Immunoassay and mRNA hybridisation assay for beta-5 protein - usefu for the detection of carcinoma(s) and to distinguish different cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1750 AACAGCGCCAGGTGCAACGGGAGCGGGACCTATGTCTGTGGGCGTGTGTGAGGCCCC

Hydronephrosis gene - useful to treat or diagnose renal diseases and disorders, e.g. vesical-ureteral reflux, pelvi-ureteral junction obstruction, multicystic renal dysplasia or renal agenesis
Disclosure; Fig 6A-B; 73pp; English.
This DNA encodes a USF2 gene derived from human chromosome 19. A translocation partner to this gene on chromosome 6 is the hydronephrosis gene (BNG) product. The HNG gene can be used as a starting point to design suitable compounds or techniques for the treatment of renal diseases or disorders, or nucleotide probes for diagnosing cells involved in renal diseases and disorders. The diagnosing cells involved for diagnosing cells involved for diagnosing cells involved in renal diseases and disorders. The

Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pTTT3 vector. Library is normalized. Library was constructed by Bento Scares and M. Fatima Bonaldo. " 154 c 123 g 128 t 1 others

polylinker; 1st strand cDNA was prepared from mammary
gland tissue from a lactating female, and was then primed
with a Not I - oligo(dT) primer. Double-stranded cDNA was
ligated to Eco RI adaptors (Pharmacia), digested with Not
I and cloned into the Not I and Eco RI sites of the
modified pi773 vector. Library is normalized. Library
was constructed by Bento Scares and M. Fatima Bonaldo. "

Strand).

The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous. The length in codons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. The position of possible itbosome binding site sequences are given where these have been used to deduce the initiation codon. Gene prediction is based on positional base preference in codons using a specially developed Hidden Markow Model (Kroph et al., Nucleic Acids Research, 22(22):4766-4738(1994)) and the FramePlot program of Bibb et al., Gene 30:157-66(1984) as implemented at http://www.nih.go.jp/
in/Cgi-bin/frameplot.pl. CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation codon gity, ttg or (att)) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the most upstream initiation codon.

Important: This sequence May Nor be the entire insert of the sequenced clone. If may be shorter because we arrange for a small overlap between neighbouring submissions. Cosmid 664 lies between D31 and D63 in the Asel-D genomic restriction fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    project,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /gene="adk"

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have (URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C. CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gtg, or ttg) which is preceded by an upstream ribosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cole,S.T., Brosch,R., Parkhill,J., Garnier,T., Churcher,C.,

available on the World Wide Web.

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C. CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gtg, or ttg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream initiation codon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             protein similar to several Mycobacterium tuberculosis proteins e.g. MTC128.14 (515 aa), MTCY19H5.28c (516 aa)and (MTV051.09). Has hydrophobic stretch, possibly signal peptide at N-terminus. FASTA scores: 2970801MTC128_14 (515 aa) opt: 1006 z-score: 582.8 E(): 5.9e-25; 34.3% identity in 559 aa overlap; 2971821MTCY19H5_28 (516 aa) opt: 979 z-score:567.7 E(): 4.1e-24; 33.3% identity in 555 aa overlap. TBparse score is 0.897"
